Test bench for data to string converter. This will run a file through the system and write its output. These can then be compared to check for errors. If the files are identical, no errors. A FST file will be written.

#### **Parameters**

**DELIMITER** break value between multple strings

parameter

**TERMINATION** termination value of full string from serial port, byte only. (n = 0A r = 0D).

parameter

**SBUS\_WIDTH** bus width of master (data) output

parameter

**USER\_WIDTH** user width of master bus, only in 4 bit nibbles, and at least 4 bits.

parameter

**DEST\_WIDTH** dest width of master bus, only in 4 bit nibbles, and at least 4 bits.

arameter

**PREFIX\_LEN** length of following prefix strings.

parameter

**DATA\_PREFIX** prefix for data hex strings

parameter

**DEST\_PREFIX** prefix for destination hex strings

parameter

**USER\_PREFIX** prefix for user hex strings

parameter

## **Ports**

aclk Clock for AXIS

arstn Negative reset for AXIS

**s\_axis\_tdata** Input data

```
    s_axis_tvalid
    S_axis_tuser
    S_axis_tdest
    Destination data to convert
    s_axis_tready
    When active high the device is ready for input data.
    m_axis_tdata
    m_axis_tvalid
    Men active high the output data is valid
    m_axis_tready
    When set active high the output device is ready for data.
```
